

WisDOT - CVTA - GLTEI Emergency Responders Workshop

8:00 am - 5:00 pm ♦ May 18 2011

**WisDOT Statewide Traffic Operations
433 W. St. Paul Ave., Suite 300
Milwaukee, WI 53203**

Workshop Goals

- Update participants on government program and funding status and plans related to emergency vehicle technologies
- Develop shared perspective on future telematics applications and technologies
- Foster collaborative efforts on future solutions
- Establish direction for future research

Who Will Attend:

Public Entities, GLTEI Members, CVTA Members and invited guests.

Pre-registration is requested.

Format:

The room will be arranged with a lectern, moderator's table and round tables seating 8-10 people each. The attendees are asked to seat with other groups to enable a richer exchange of thoughts and ideas.

After short, informational presentations on WisDOT, CVTA and GLTEI, we will have two presentation and roundtable discussion sessions. For each session, three speakers will present information on relevant technologies, programs and applications areas. For the roundtable discussion, input will be solicited from the audience to focus the discussion or suggest other areas to consider.

A 'rapporteur' will be solicited from each table, noting the 3 to 5 major points generated by each table. The results from each group will be shared by the moderators in a general discussion at the end of each session. CVTA will compile all points from these sessions and email a summary to the participants after the workshop.
